

Acknowledgments

I am deeply thankful to my supervisors: Elisa Sicuri for her guidance and wisdom (and infinite patience), Jaqueline Broerse for pushing me out of my research comfort zone, and Menno Pradhan for his ability to tackle complex problems and keep me focused.

I am profoundly grateful to the professionals at the CISM, particularly those who are out in the field collecting data every day. They are the foundation of health research.

I've found both friendship and guidance in my colleagues at ISGlobal: Laia Cirera, Celine Aerts, Alberto García-Basteiro, Carlos Chaccour, Nuria Casamitjana, Sergi Alonso, and Lola Jover. They have been irreplaceable co-travelers on this journey.

I am also grateful to those who guided me unofficially and worked with me formally on the different studies of this dissertation, particularly the collaborators at Maragra who had the willful courage to open their data for analysis.
